Summary

Data Scientist with a strong background in **AI Research**, with experience across **healthcare**, **NLP**, and **geoscience** domains. Builds **end-to-end ML pipelines**, conducts **statistical and spatial analysis**, and deploys models that hold up in production. Develops **agentic AI pipelines** using **RAG**, **LLMs**, and **MCP**. Published across **IEEE**, **SAGE**, and **Springer Nature**. Comfortable working across the full stack from raw data to results, and collaborating directly with domain experts. Proficient in **Python**, **SQL**, **R**, **PyTorch**, and **TensorFlow**.

Work Experience

Data Analyst — Jul 2026 - Present
The City College of New York — *New York, NY*

- Continued **institutional data analysis**, advising insights, and engagement strategy.

Research Assistant — Dec 2025 - Present
CUNY Research Foundation — *New York, NY*

- Developing an **agentic AI pipeline** using **RAG**, **LLMs**, and **MCP-connected tools** for natural language querying over complex geoscience databases.
- Bridging **geoscience domain expertise** and **AI engineering**, translating research requirements into technical specs and iterating on pipeline outputs for interpretability and scientific relevance.
- Designing the **end-to-end technical stack**: **vector database architecture**, domain-specific **embedding models**, **LLM optimization**, and **cloud deployment** for a production-ready geoscience research tool.

Data Evangelist Intern — Feb 2026 - May 2026
DataCamp — *New York, NY*

- Designed and maintained **scalable data pipelines** to collect, integrate, and validate **multi-source data** through automated scripts, APIs, and web scraping.
- Built **data applications** and **analytical workflows** powered by **LLMs**, transforming raw data into user-facing tools for exploring key metrics.
- Analyzed data to surface trends and key drivers, packaging findings into **visualizations** and structured reports.

Data Analyst — Oct 2025 - Feb 2026
The City College of New York — *New York, NY*

- Led analysis of **institutional data** using **Excel, Tableau,** and **Python**, surfacing patterns that shaped **advising and student engagement programs**.
- Conducted **data-driven surveys** and **retention studies**, uncovering behavioral patterns that inform targeted outreach.
- Built **analytical reports** and **dashboards** that surfaced trends and anomalies across departments, replacing gut-feel decisions with **data-backed ones**.

Technical Skills

Languages: Python, SQL, R

Data Analysis: NumPy, Pandas, SciPy, Excel

Data Visualization: Matplotlib, Seaborn, Plotly, ggplot2, Tableau

AI & Machine Learning: TensorFlow, PyTorch, Scikit-learn, OpenCV, NLTK, Word2Vec

LLMs & Agents: LLMs, RAG, MCP, Hugging Face, ChromaDB

Database & Big Data: MySQL, MongoDB, Snowflake

MLOps & Cloud: AWS, MLflow, Git/GitHub, Docker, Vercel

Others: Data Preprocessing, Feature Engineering, Model Evaluation, A/B Testing

Education

The City College of New York — New York, NY
M.S. in Data Science and Engineering — *Dec 2027*

East West University — Dhaka, Bangladesh
B.S. in Computer Science and Engineering — *Dec 2023*

Research Experience

Explainable AI-Driven Hybrid Transfer Learning Framework for Accurate Skin Cancer Diagnosis – *Digital Health (SAGE)*

- Achieved **98.65% accuracy (F1 98.64%)** on multi-class skin cancer classification using a hybrid EfficientNetB0 + Random Forest model with advanced preprocessing, validated across datasets.

Robust Dual-Site Cancer Screening via Multi-Scale Vision Transformer and Rapid Recognition Pipeline – *IEEE Xplore*

- Developed a **multi-scale Vision Transformer framework** (Multi-ViT, MA-Transformer V2, MobileUNETR, TinyViT, Xception) achieving **99.12% accuracy** on PAD-UFES-20 and **99.37%** on Oral Cancer datasets, with strong F1 scores.

Texture Feature-Based Colonic Polyp Detection Using Deep Learning Techniques – *Springer Nature*

- **Achieved 97.33% IoU** for colonic polyp segmentation using DeepLabv3+, outperforming VGG16 and prior studies to set a new benchmark in colorectal cancer detection.

Optimizing Energy Usage: Genetic Algorithms Leading the Charge Toward Sustainability – *Springer Nature*

- **Reduced** annual household electricity usage by **34.54%** (90,449 watts) using **Genetic Algorithms**, demonstrating strong environmental impact and potential for **nationwide scalability** in sustainable energy optimization.

Accepted Papers (In Press)

A Lightweight Transformer Ensemble for Explainable Depression Emotion and Severity Detection – *IEEE (2025)*

- Achieved **state-of-the-art F1 81.63%, Precision 83.24%, Specificity 86.92%** on benchmark datasets with a lightweight transformer ensemble, providing **LIME-based explanations** and a deployable real-time interface for depression detection.

Papers Under Review

Multimodal Learning in Medical Imaging: Methods, Benchmarks, Evaluation, & Clinical Translation – *Elsevier*

- Conducted a structured review of **multimodal learning in medical imaging**, proposing a unified taxonomy while identifying key gaps in **robustness, reproducibility, and benchmark standardization** across healthcare AI systems.

Data Projects

NYC HIV/AIDS Trend Analysis & Predictive Modeling | *R, Tidyverse, ggplot2, sf, rpart, RandomForest, caret*

- Cleaned and engineered **multi-year NYC Open Data** on HIV/AIDS diagnoses, resolving suppressed values, harmonizing demographic fields, and producing analysis-ready datasets for modeling.
- Performed **spatiotemporal analysis of HIV/AIDS trends across NYC**, uncovering persistent geographic and demographic disparities, and leveraged **Random Forest models ($R^2 = 0.65$)** to identify high-impact predictors for targeted public health interventions.

Global Population Growth Modeling & Forecasting | *R, Tidyverse, ggplot2, leaps, caret*

- Engineered a **longitudinal time-series dataset** from World Bank indicators, integrating population, fertility, mortality, migration, and age structure data across **200+ countries**, and conducted **multi-decade demographic analysis** by region and income group.
- Developed and validated **population growth forecasting models**, achieving **$R^2 = 0.755$**, and applied **rolling-window cross-validation** to assess short- and long-horizon predictive stability.

AI/ML Projects

Clinical Risk Modeling & Unsupervised Structure Analysis | *Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn*

- Curated and standardized **clinical tabular data**, addressing missingness, outliers, and feature scaling to support supervised prediction and unsupervised structure discovery.
- Performed **diagnostic exploratory analysis** to identify risk-associated variables, then developed a **logistic regression classifier (80% test accuracy)** and evaluated **K-Means clustering with PCA and t-SNE projections** to assess latent structure in medical risk profiling.

Intrusion Detection System | *Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn*

- **Processed and analyzed 2.5+ million network traffic records** through comprehensive EDA and reduced memory usage by **47.5%** through numerical datatype downcasting, improving training efficiency.
- **Achieved 97% median accuracy** in detecting network anomalies using machine learning models, uncovering key traffic patterns and strengthening anomaly detection capabilities.

Additional

- Solved **500+ problems** on platforms like **LeetCode**, **HackerRank**, and **Beecrowd** (formerly URI), combined.
